

Final Project

Jeff Fitih

https://github.com/jfitih/Final_in_SQL

For my final project I would like to have Kodi repos to populate my database with repos to work in my database. To have the data to be retrieved from a Google Drive to run as a server to my URL.

My python code was from the github forum.

<forum><https://github.com/cguZZman/plugin.googledrive/issues></forum>

Which was provided so I can make my own repo for others to bounce off of. I can say I am trying to make a stop shop for all your entertainment needs. Fire has a lot of streaming. But the problem I am have is finding the correct format. Because Apple has a different format than Google and Google has a different format than Android. I want once a person hits my URL they grab my zip drive that will have all add-ons without having my wizard being compromised. I will keep populating SQL with more builds and add-ons.

- Open-source software originally designed for Microsoft Xbox
 - Can be installed on any media- TV, desktop, laptop, smartphone, and tablet
 - Compatible on all platforms, including Mac, Android, Windows, iOS, and Linux
 - Used to watch free movies, live streaming of music shows and sporting events, international TV shows, and more
 - Download Kodi installation that works for your device
 - Download Fusion Installer
 - Run configuration wizard, or Addon Installer
 - Config Wizard is automated, whereas Addon Installer allows you to choose Kodi Addons before installing them
-
- Takes no more than 15 minutes to install
 - Access to thousands of live TV channels
 - Unlimited access to international TV shows and live events
 - Easy to use
 - Safe

- Addons are like apps
 - Popular KodiAddons include 1Channel, cCloud- TV, and USTVnow Plus
 - Addons are installed under different sections
 - Categories include pictures, videos, music, etc.
-
- Videos can be seen only from a specific year and earlier: This could be because you
 - haven't set the proper date and time on the Kodi.
 - No stream available: This has nothing to do with Kodi Addon. You'll have to search for another stream
-
- TV ADDONS offers a platform for several third party developers
 - I want to offer thousands of Kodi Addons for users to choose from

# Google Drive KODI Addon
```

Google Drive for KODI

Play all your media from Google Drive including Videos, Music and Pictures.

- * Unlimited accounts

- * Playback your music and videos. Listing of videos with thumbnails.

- * Use Google Drive as a source.

- * Subtitles can be assigned automatically if a .str file exists with the same name as the video.

- * Export your videos to your library (.strm files). You can export your music too, but kodi won't support it yet. It's a Kodi issue for now.

- * Show your photos individually or run a slideshow of them. Listing of pictures with thumbnails.

* Auto-Refreshed slideshow.

* Use of OAuth 2 login. You don't have to write your user/password within the add-on. Use the login process in your browser.

* Extremely fast. Using the Google Drive API
